

Soil Study for Septic System Suitability
February, 2025
John R. Davis, Jr. LSS
Parcel # 010947 Sims Bridge Road
Franklin County, NC

The soil area shown in "Orange" is **usable** for gravel or "Accepted" gravelless septic trenches. The soil is sandy loam topsoil over clay subsoil. A single family 4 bedroom house septic system generally requires about 10,000 square feet of usable soil for a complete septic system. This property has about 26,800 square feet of usable soil. You have adequate soil on this property for a septic system for a single family house. If you wish, you may submit this soil map along with an application for a septic system permit to Franklin County Health Department as part of the traditional permitting option.
